

SRIVARDHAN GADEPALLI

Product Owner | Business Analyst | Agile Delivery Specialist

gadepallivardhan@gmail.com | +91-9676832893 | Hyderabad, India | linkedin.com/in/srivardhangadepalli

PROFESSIONAL SUMMARY

Results-driven **Product Owner and Business Analyst** with **4.5+ years of experience** managing end-to-end product lifecycle across enterprise workflow and B2B SaaS platforms. Skilled in bridging the gap between business and engineering teams by eliciting and documenting complex business requirements, authoring high-quality **PRDs, BRDs, and User Stories** with well-defined acceptance criteria. Proven ability to own and prioritise **product backlogs**, conduct **market research and competitive analysis**, develop user personas, and drive **Agile/Scrum/SAFe** ceremonies. Experienced in **wireframing and prototyping (Figma, Balsamiq)**, feature flag management, funnel and retention analysis, and business case development. Strong technical understanding of **REST API integrations, data flow architectures, data governance**, and data quality. **PSPO I certified** with hands-on expertise in **Jira, Confluence, and Aha!**. Adept at stakeholder management, vendor management, UAT leadership, and data-driven decision making using **SQL, Power BI, and Tableau**.

KEY ACHIEVEMENTS

- **Reduced enterprise HCM workflow request turnaround time by 25–30%** through targeted product delivery and process automation initiatives.
- **Improved operational monitoring accuracy by ~25%** by designing and implementing Power BI KPI dashboards tracking SLA compliance, feature adoption, and release quality.
- **Reduced manual processing effort by ~25%** through AS-IS/TO-BE process mapping, gap analysis, and automation of HR approval workflows.
- Successfully delivered multiple product releases end-to-end — from discovery and MVP scoping through UAT, launch, and post-release adoption — with **zero critical post-release defects**.

PROFESSIONAL EXPERIENCE

Business Analyst & Product Owner | EvonSys India Pvt Ltd

Dec 2022 – Present | Hyderabad

Project 1: PeopleHCM — Enterprise HCM Workflow Platform *(Dec 2022 – Present)*

Product Ownership & Backlog Management

- Owned end-to-end product lifecycle of an enterprise HCM workflow platform — from product discovery, MVP scoping, **market research**, competitive analysis, and user persona development through roadmap planning, sprint delivery, release coordination, and post-launch adoption tracking.
- Defined **product vision, north star metric**, and OKR-aligned success metrics; developed business cases to support feature investment decisions; authored Epics and User Stories with clear acceptance criteria and enforced **Definition of Done** across all sprint cycles.
- Owned and prioritised product backlog using **MoSCoW** and value vs. effort frameworks; managed epics, user stories, **feature flags**, and sprint goals in Jira and Confluence to balance business value, stakeholder urgency, and technical feasibility.
- Coordinated monthly release cycles including scope alignment, dependency tracking, backlog readiness validation, and risk mitigation; authored and published detailed **release notes** for all feature and maintenance releases.
- Planned and executed **Go-to-Market (GTM)** activities for feature launches — release communications, training documentation, funnel analysis, and post-launch retention and adoption measurement.
- Managed **vendor relations** and coordinated with third-party vendors to evaluate tools, assess vendor products, and ensure alignment with product and technical requirements.

Business Analysis & Requirements Engineering

- Conducted **user research, stakeholder interviews, customer journey mapping**, and Voice-of-Customer (VoC) sessions to build user personas and elicit business needs; translated findings directly into product roadmap and prioritisation decisions.
- Authored high-quality **PRDs, BRDs, FRDs**, use cases, functional specifications, and process flows reflecting system behaviours, API integration touchpoints, and data mapping logic; maintained Requirements Traceability Matrix for audit readiness and change management compliance.
- Created wireframes and interactive prototypes in **Figma and Balsamiq** to validate UX concepts, data flows, and user journeys before development — significantly reducing rework and development cycles.

- Produced **AS-IS and TO-BE process maps** (BPMN, UML, DFDs) for enterprise HR workflows; performed gap analysis and drove ~25% reduction in manual processing effort through targeted automation.
- Enforced **data governance and data quality** standards across product data pipelines; conducted data profiling and validation to ensure accuracy, completeness, and compliance of data flowing through enterprise systems.
- Worked hands-on with **REST API integrations**; documented API-driven data intake processes, interpreted JSON request/response payloads and data contracts, and collaborated with engineering to validate integration touchpoints.
- Partnered with engineering during **sprint grooming** to ensure User Stories reflected functional and technical expectations including **API specs, payload attributes, validation rules**, and error codes.

Agile Delivery & Cross-functional Leadership

- Facilitated all **Agile/Scrum ceremonies** end-to-end — sprint planning, backlog refinement, sprint reviews, retrospectives, and big room planning — with cross-functional and offshore engineering teams.
- Led **UAT planning and execution** — authored test cases, performed defect triage and root cause analysis, and obtained formal business sign-off prior to each production release.
- Built **Power BI KPI dashboards** to monitor SLA compliance, feature adoption, and operational metrics; used SQL and Tableau to validate post-release improvements and generate actionable insights.
- **Managed stakeholder communication** across business, operations, and engineering; provided timely, accurate updates to product leadership and clients on **sprint progress, release readiness**, and issue resolution.

Project 2: Case Study Hub — Marketing Content Management Platform (Oct 2025 – Present | Parallel to PeopleHCM)

Platform: Pega Constellation | Type: Internal Marketing Technology Product

- Conducted **assessment and requirements gathering sessions** with the marketing team to define scope, objectives, and pain points of the existing manual case study process; translated findings into a full product feature roadmap.
- Authored detailed **BRDs, User Stories, and Acceptance Criteria** for all 8 feature areas — Case Study Creation Wizard, Content Management System, Template Library, Collaboration Tools, Approval Workflow, Analytics Dashboard, CRM Integration, and Access Control.
- Defined the **configurable multi-stage approval workflow** logic including SLA thresholds, escalation rules, and automated email notification triggers on the Pega platform.
- Worked closely with **Pega Constellation** developers to ensure UI/UX requirements were accurately translated into the Constellation design system — defining screen layouts, component behaviour, and interaction flows.
- Defined **CRM integration requirements** for Pega and Salesforce connectors — data mapping, sync rules, field mappings, and error handling logic to associate case studies with accounts, opportunities, and leads.
- Designed **wireframes for the Case Study Creation Wizard and Analytics Dashboard** in Figma; facilitated design walkthroughs with stakeholders and incorporated feedback prior to development.
- Coordinated **UAT with marketing stakeholders**, managed feedback cycles, performed defect triage, and obtained formal business sign-off across all modules.
- Defined **role-based access control matrix** for administrators, marketers, sales representatives, and approvers — ensuring confidentiality and data security of sensitive case study content.

Associate Business Analyst / Platform Developer | EvonSys India Pvt Ltd Nov 2021 – Nov 2022 | Hyderabad

- Gathered and documented **functional requirements, User Stories, use cases**, and data flow diagrams to support scalable feature development on an enterprise HR workflow automation platform.
- Implemented **REST API integrations**, configured workflow components, and supported approval process automation; maintained requirements traceability matrix and collaborated with QA to validate test cases.
- Participated in full **Agile/Scrum sprint lifecycle** — sprint planning, reviews, retrospectives, and release support — across onshore and offshore teams, ensuring timely, high-quality product delivery.

SIDE PROJECTS

1. RAG-Based Mutual Fund FAQ Chatbot

AI / NLP | Retrieval-Augmented Generation | FinTech Domain

Designed and developed an AI-powered FAQ chatbot focused on mutual fund information using **Retrieval-Augmented Generation (RAG)**. The solution combines curated mutual fund documentation with **large language model** capabilities to deliver accurate, context-aware responses.

- Defined the **problem statement** — investors struggle with scattered documentation, complex financial terminology, and delayed customer support; identified **success metrics** including query resolution rate, investor confidence, and reduction in manual support dependency.

- Designed end-to-end workflow covering **data ingestion, semantic search, prompt orchestration**, and conversational interface; documented functional requirements for knowledge base structure, query handling logic, and response accuracy standards.
- Prioritised features across **data pipeline, retrieval accuracy**, and UX layers; validated chatbot responses against curated documentation to ensure factual accuracy and compliance with financial information standards.
- Reduced dependency on **manual customer support** for repetitive mutual fund queries; enabled faster, self-service access to scheme-related information improving **investor confidence and digital engagement**; scalable knowledge delivery without proportional increase in support cost.

2. AI-Powered Restaurant Recommendation Platform

AI / Personalisation | Product & UX | Consumer Tech

Designed and built an **AI-driven restaurant recommendation platform** that delivers personalised dining suggestions based on user preferences, location, cuisine affinity, budget, and historical behaviour.

- Defined **product vision, problem statement**, and success metrics including **relevance score, user engagement rate**, and conversion rate; applied AI-assisted development (Cursor) to rapidly prototype and iterate on core features.
- Translated user needs into clear **functional requirements, user flows**, and recommendation logic; mapped **user personas and journeys** to surface key pain points in restaurant discovery and decision-making.
- Implemented **personalisation and ranking logic** to improve recommendation accuracy and user relevance; validated ideas through iterative refinement, feedback loops, and scenario-based testing.
- Demonstrated **end-to-end product thinking** from discovery to delivery; showcased strong alignment between business objectives, AI capabilities, and user value across recommendation systems and digital product design.

3. Restaurant Decision Intelligence Platform

Real-Time Analytics | Operational Intelligence | B2B SaaS

Designed and owned a product prototype for a **real-time decision intelligence platform** to address operational decision gaps in restaurant management. Defined the **product vision, user personas**, and core use cases focused on proactive, data-driven decision-making.

- Identified the core problem — restaurant managers lack **real-time operational visibility** and make reactive decisions during peak hours; defined **product vision** to shift operations from reactive issue handling to proactive, insight-driven management.
- Documented requirements for a **centralised decision dashboard** displaying key operational metrics — order preparation time, customer ratings, order success rate, and risk alerts; specified **real-time order monitoring, menu performance analytics, peak readiness forecasting**, and quality monitoring modules.
- Incorporated **trade-off and earnings impact scenarios** to demonstrate how managers can balance speed, quality, cost, and customer satisfaction; prioritised features based on operational impact and validated feasibility through stakeholder walkthroughs.
- Validated a scalable product concept improving **operational efficiency, service consistency**, and profitability — laying the foundation for future product development and stakeholder buy-in.

4. Food Delivery Mobile App — End-to-End Ordering & Rewards Experience

Mobile Product | UX Prototype | Consumer App

Owned the **product definition and prototype development** for an end-to-end food delivery mobile application. Conducted **problem discovery** by analysing user journeys across discovery, ordering, checkout, and post-delivery engagement, and translated insights into clear product goals and success metrics.

- Identified the core problem — food delivery platforms experience **user drop-offs due to fragmented ordering flows, high checkout friction**, and weak post-delivery engagement; defined **success metrics** around conversion rate, repeat usage, and task completion rate.
- Defined core **user personas** and prioritised key workflows — restaurant discovery, menu browsing, cart management, checkout, **real-time order tracking**, and post-delivery feedback; produced detailed **user flows and functional requirements** to reduce friction and improve task completion.
- Drove the design of a **loyalty and rewards system** to increase repeat usage through milestone-based incentives, discounts, and free delivery benefits; established **account and profile management** covering saved addresses, payment methods, notifications, and rewards continuity.
- Delivered a validated product prototype demonstrating a seamless, **user-centric food ordering experience** — highlighting how thoughtful decisions around usability, transparency, and incentives can improve **conversion, repeat engagement**, and overall customer satisfaction; strong foundation for MVP development.

CORE COMPETENCIES

Product Management & Ownership

Product Lifecycle Management, Product Vision & Roadmap Planning, MVP Definition, PRD & BRD Authoring, Epic & User Story Writing, Acceptance Criteria,

	Definition of Ready & Done, Feature Prioritisation (MoSCoW, Value vs. Effort), Backlog Management, Product Discovery, Product-Market Fit, OKR & KPI Definition, North Star Metric, Go-to-Market Planning, Release Management, Feature Flags, Business Case Development
Market & User Research	Market Research, Competitive Analysis, User Persona Development, Customer Journey Mapping, Voice of Customer (VoC), User Research, Stakeholder Interviews, Pain Point Discovery, Funnel & Retention Analysis
Business Analysis	Requirements Elicitation & Gathering, Functional Specifications, Process Flow Documentation, Gap Analysis, AS-IS/TO-BE Process Mapping, BPMN, UML, DFDs, Data Mapping Logic, State Transition Analysis, Requirements Traceability Matrix, Change Management, Root Cause Analysis, Business Impact Analysis
Agile & Delivery	Agile/Scrum, Kanban, SAFe, Sprint Planning, Backlog Grooming, Sprint Reviews & Retrospectives, Big Room Planning, Velocity Tracking, Story Points, Dependency Management, Change Control, SDLC, Offshore Team Collaboration
Technical Fluency	REST API Integration, JSON Data Structures, Request/Response Payload Interpretation, Data Contracts, Microservices Awareness, API-Driven Data Intake, Transactional Systems, Cloud-Native Product Delivery, Wireframing & Prototyping (Figma, Balsamiq), Pega PRPC 8.x, Pega Constellation
Data & Analytics	SQL, Power BI, Tableau, KPI Dashboard Design, Data Governance, Data Quality, Data Profiling & Validation, Data Modelling (Logical/Physical), ERD Design, SLA & Operational Metrics, Feature Adoption Analytics, Funnel & Retention Analysis, Actionable Insights, Data-Driven Decision Making
UAT & Quality	UAT Leadership, Test Case Design, Defect Triage & Lifecycle Management, Defect Analysis, Root Cause Analysis, Compliance Validation, QA Coordination, Business Sign-off
Stakeholder & Vendor Management	Stakeholder Management, Vendor Management, Vendor Relations, Cross-functional Alignment, Technical Writing, Executive Communication, Client & Partner Engagement, Offshore Team Coordination
Domain Expertise	HR Tech / HCM Platforms, Marketing Technology, Enterprise Workflow Automation, B2B SaaS, FinTech, Consumer Apps, Internal Product Development, API-Driven Integrations, Pega Constellation Applications
AI & Emerging Technology	Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), AI-Assisted Development, Recommendation Systems, Conversational AI, Prompt Orchestration, Semantic Search

TOOLS & TECHNOLOGIES

Product & Agile Tools	Jira, Confluence, Aha!, Azure DevOps, Trello, Asana
Analytics & BI	SQL, Power BI, Tableau, MS Excel
Wireframing & Design	Figma, Balsamiq, Miro, Lucidchart, MS Visio, Draw.io
Technical Platforms	Pega PRPC (8.x), Pega Constellation, REST APIs, JSON, Microsoft Office Suite
AI Tools	Cursor (AI-Assisted Development), RAG Frameworks, LLM Integrations

CERTIFICATIONS

- **Professional Scrum Product Owner I (PSPO I)** – Scrum.org
- **Aha! Product Management Professional Certification**
- **Pega Certified Business Architect (PCBA)**
- **Pega Certified Senior System Architect (PCSSA)**

EDUCATION

Bachelor of Technology (B.Tech) – Electrical and Electronics Engineering *Jawaharlal Nehru Technological University, Kakinada | 2015 – 2019*
