

# SRIVARDHAN GADEPALLI

Senior Business Analyst | Cross-Border Payments | SWIFT MT & ISO 20022 | Requirements Engineering  
gadepallivardhan@gmail.com | +91-9676832893 | Hyderabad, India | [linkedin.com/in/srivardhangadepalli](https://www.linkedin.com/in/srivardhangadepalli)

## PROFESSIONAL SUMMARY

---

Senior Business Analyst with 5+ years in payments and banking technology, specializing in cross-border and correspondent payments, high-value and wire payments (SWIFT, Fedwire / FED, SEPA), payment exceptions and investigations, and the SWIFT-to-ISO 20022 (CBPR+) message landscape. Experienced eliciting and documenting complex requirements — BRDs, FRDs, user stories, use cases, and functional specifications — for SWIFT MT and ISO 20022 (MX) message processing, multi-currency and FX handling, payment recalls / returns / cancellations, non-receipt claims, and nostro/vostro reconciliation. Strong in AS-IS/TO-BE process mapping (BPMN, UML, DFDs), gap analysis, SLA and compliance alignment, REST API documentation, and end-to-end UAT. Delivers payment-investigation automation on the Pega platform (Smart Investigate, 8.6–24.2) with Jira, Confluence, Figma, SQL, and Power BI. CPBA, CSSA, and PSPO I certified.

## KEY ACHIEVEMENTS

---

- Drove requirements for an enterprise cross-border payment-investigation and exception-automation platform — defining intake and routing of inbound SWIFT MT and ISO 20022 messages, investigation-intent classification, and standardized, compliance-aligned resolution of payment exceptions (non-receipt claims, recalls, returns, re-issued payments).
- Reduced investigation and approval turnaround time by **25–30%** through requirements-led process automation and AS-IS/TO-BE redesign of manual payment-exception workflows.
- Cut manual processing effort by **~25%** through rigorous gap analysis, process mapping, and straight-through-processing (STP) automation requirements.
- Delivered multiple enterprise releases end-to-end — from requirements elicitation and UAT through production sign-off — with **zero critical post-release defects**.
- Authored and maintained the **Requirements Traceability Matrix** across all releases, ensuring audit readiness and change-management compliance in regulated banking environments.
- Improved operational monitoring accuracy by **~25%** with Power BI and operational dashboards tracking SLA compliance, exception volumes by message and investigation type, and release quality.

## PROFESSIONAL EXPERIENCE

---

**EvonSys India Pvt Ltd** — Hyderabad, India

Nov 2021 – Present

### **NatWest — Cross-Border Payment Investigations & Exception Automation**

*Client: NatWest | Role: Senior Business Analyst | Domain: Banking – Payments | Platform: Pega Smart Investigate (Pega 24.2)*

- Led requirements engineering for a **cross-border payment-investigation platform** handling the full lifecycle of payment exceptions — from inbound message intake through investigation, resolution, and outbound correspondence — across dispatch, orchestration, and resolution stages.
- Defined intake and routing across four channels — front-office (call-centre agents), back-office payment operations, automated inbound **SWIFT MT and ISO 20022 (MX)** messages, and an NLP-driven email channel that auto-creates investigations from payment-related emails.
- Specified the **intent-to-resolution logic** mapping each investigation type to the correct resolution action — non-receipt claims, payment recalls/cancellations, returns to sender, re-issued payments, requests for information, and ad-hoc correspondence.
- Authored functional requirements for outbound correspondence across **SWIFT MT** (MT103, MT192, MT199) and **ISO 20022 / CBPR+** (pacs.008, pacs.004, camt.056, camt.110, camt.029), including message-template field rules (mandatory / editable / visibility) filtered by line of business and investigation type.
- Defined the **4-eye / 6-eye verification** model — which payment actions and amount thresholds require Supervisor vs. Manager approval before funds move or correspondence is sent — and mapped the approve / reject / repair workflow to the operations hierarchy.

- Specified **SWIFT case-management and Stop-and-Recall (SRP)** requirements — investigation requests, replays, closure and escalation actions, and payment-recall flows (camt.056 / camt.029 / MT199) — including the standard cancellation reason codes (duplicate, fraud, wrong amount, wrong agent, etc.).
- Defined **automated chaser / follow-up** requirements for unanswered correspondence and the **duplicate-payment detection** scoring model (amount, date, references, account) that drives straight-through linking vs. manual review.
- Documented **nostro/vostro reconciliation** requirements across the five break types (ledger-vs-statement mismatches, value differences) and the REST API integration between the reconciliation engine and the investigation platform.
- Authored AS-IS/TO-BE process maps and a formal **gap analysis** of payment-processing limitations (e.g., end-to-end fund-recovery steps not yet automated) and raised them with the client ahead of go-live as development/configuration requirements.
- Defined role-based access across operations personas (agent, payment specialist, supervisor, manager), work-queue and **SLA** setup per transaction type (internal vs. external), and host-currency / FX configuration per branch; led UAT, defect triage, and business sign-off using operational dashboards.

## JPMC — Cross-Border FX Payment Investigations

*Client: JPMC | Role: Business Analyst | Domain: Banking – Payments | Platform: Pega Smart Investigate (Pega 8.6)*

- Gathered and documented requirements for a **cross-border FX payment-investigation** implementation, covering intake of inbound **SWIFT, SSR, and eServe** messages and the lifecycle from investigation creation through resolution.
- Authored BRDs, FRDs, user stories, and use cases for investigation types and the outbound **SWIFT MT correspondence** issued to counterparties throughout the investigation.
- Defined **cross-border, multi-currency** requirements — currency handling and FX conversion for investigation and transaction amounts — in collaboration with international teams to support seamless global transactions.
- Mapped manual, spreadsheet-and-email-driven investigation workflows (AS-IS) to automated TO-BE flows and performed gap analysis targeting reduced processing time and improved accuracy and compliance.
- Documented SWIFT **message-parsing, field-mapping, validation, and exception-handling** rules, including error-queue handling for messages that failed automated parsing.
- Specified correspondence templates and the conditions under which each investigation type generated outbound messages, along with compliance checkpoints and audit-trail requirements across the resolution flow.
- Maintained the Requirements Traceability Matrix, authored UAT test cases, coordinated business testing and defect triage, and participated in the full Agile/Scrum lifecycle across onshore and offshore teams.

## PeopleHCM — Enterprise HCM Workflow Platform

*Role: Business Analyst & Product Owner | Domain: HR Tech / HCM | Technology: Pega, REST APIs, Power BI*

- Authored PRDs, BRDs, FRDs, use cases, and functional specifications capturing system behaviour, business rules, and API integration touchpoints for an enterprise HCM workflow platform.
- Produced AS-IS/TO-BE process maps (BPMN, UML, DFDs) for HR approval workflows and ran gap analysis that reduced manual processing effort by **~25%**.
- Owned and prioritised the product backlog (MoSCoW, value vs. effort), managed epics and user stories in Jira/Confluence, and facilitated all Agile/Scrum ceremonies with offshore teams.
- Led UAT and built Power BI KPI dashboards tracking SLA compliance, feature adoption, and release quality; delivered multiple releases with zero critical post-release defects.

## Pega Case Study Hub — Marketing Content Management Platform

*Role: Business Analyst & Product Owner | Domain: Marketing Technology | Technology: Pega Constellation*

- Ran requirements-gathering sessions with marketing stakeholders and translated findings into a roadmap covering 8 feature areas (Case Study Wizard, CMS, Template Library, Collaboration, Approval Workflow, Analytics, CRM Integration, Access Control).
- Authored BRDs, user stories, and acceptance criteria, and defined configurable multi-stage approval workflow logic (SLA thresholds, escalation, notifications) on Pega Constellation.
- Defined Pega–Salesforce CRM integration requirements (data/field mapping, sync rules, error handling) and an RBAC matrix across user roles.

- Designed Figma wireframes, facilitated design walkthroughs, and coordinated UAT and business sign-off across all modules.

## CORE COMPETENCIES

---

|                                  |                                                                                                                                                                                                                                                                                                                                                                                                    |
