Professional Summary

- Payments Business Analyst with **5+ years of experience in banking technology**, specializing in **cross-border and correspondent payments, payment exceptions and investigations, SWIFT MT, ISO 20022/CBPR+** and **Pega-based case management**.
- Hands-on experience with **Pega Smart Investigate, Pega PRPC** and **Pega Constellation**, backed by **CPBA** and **PSPO I** certifications.
- Experienced coordinating **payment operations, client service, treasury, compliance/risk, product, technology** and **globally distributed delivery stakeholders**.

Core Competencies

- **Payments & Transaction Banking:** Cross-Border Payments | Correspondent Banking | Payment Exceptions & Investigations | Payment Recalls & Cancellations | Returns | Non-Receipt Claims | Nostro/Vostro Reconciliation
- **SWIFT, ISO 20022 & Payment Rails:** SWIFT MT | ISO 20022 | CBPR+ | Fedwire ISO | CHAPS | SEPA | BACS | VISA | MT103/192/199 | MT n9x | pacs.008 | pacs.004 | camt.056 | camt.029 | camt.110 | camt.111
- **Payment Investigation & Processing:** Case Intake & Creation | Investigation Routing | Orchestration | Resolution Workflows | Outbound Correspondence | Stop & Recall | Duplicate Payment Detection | Verification & Approval Controls
- **Business Analysis & Delivery:** Requirements Elicitation | BRD | FRD | PRD | Epics | User Stories | Acceptance Criteria | Use Cases | Business Rules | RTM | AS-IS/TO-BE | Gap Analysis | UAT | Defect Triage | Business Sign-off | Agile/Scrum
- **Technical & Tools:** Pega Smart Investigate | Pega PRPC | Pega Constellation | REST APIs | Message Mapping | Field Validation | Jira | Confluence | Figma | Power BI | BPMN | UML | DFD

Career History

EvonSys India Pvt Ltd	Senior Business Analyst	Nov 2021 – Till Date

Select Engagement Experience

EvonSys India Pvt Ltd	***Senior Business Analyst***	***Nov 2021 – Till Date***

Project: 1

Client: Goldman Sachs – Transaction Banking (TxB), USA
Primary Role: Senior Business Analyst
Duration: Jan 2026 – Till Date

Project Description:
Enterprise Pega Payment Exceptions & Investigations initiative consolidating fragmented processing into a single case-management model across multiple payment rails.

Roles & Responsibilities:

- Led requirements elicitation and business analysis for the **Payment Exceptions & Investigations (E&I)** programme, supporting cross-border and correspondent-payment operations across multiple payment rails.
- Authored and refined **epics, user stories, acceptance criteria, functional requirements, business rules, use cases and process flows**, collaborating with operations, product, technology and other cross-functional stakeholders.
- Supported payment-investigation expansion beyond SWIFT across **Fedwire, CHAPS, SEPA CT/DD, StoneX and T2**, while working with SWIFT MT and SWIFT MX/CBPR+ investigation processing.
- Defined and refined requirements across multiple payment-investigation categories, including **Payment Cancellation, Payment Recall, Payment Amendment, Payment Tracer, Request for Information/Unable to Apply, Fraud, Regulatory and Sanctions/Compliance-related investigations**.
- Defined functional requirements for **manual and automated case creation, investigation routing, orchestration, resolution activities, verification and approval controls, and outbound correspondence** across the investigation lifecycle.
- Supported Phase 1 automation (**keyword parsing, intent assignment, transaction lookup, client/transaction-data enrichment, case SLA monitoring**) and Phase 2 capabilities (**financial adjustments, payment-engine integration, foundational STP flows, workflow orchestration, real-time payment-status updates, enhanced case routing**).
- Worked on **SWIFT MT and ISO 20022/CBPR+ message-processing requirements**, including investigation messages such as MT n9x and camt.056/camt.029/camt.110/camt.111, together with payment-message field mapping, validation and enrichment requirements.

- Defined integration requirements between **Pega, payment orchestration, CRM, compliance/risk and customer/counterparty reference-data services**, ensuring investigation cases received the information required for processing and resolution.
- Performed **AS-IS/TO-BE process analysis and gap analysis**, translating identified operational and system limitations into functional requirements, user stories and configuration/development requirements.
- Facilitated **backlog refinement, story walkthroughs and requirement clarifications**, working with business, operations, product, development and QA stakeholders throughout the delivery lifecycle.
- Supported **UAT, defect triage, requirements traceability and business sign-off** across delivery phases.
- Coordinated requirements and delivery across stakeholder groups including **Payment Clearing Operations (PCO), TxB Client Service, Corporate Treasury, Product and Operations**, alongside technology stakeholders.

Impact:

- Contributed to the transformation of highly manual, Excel-based and fragmented Payment Exceptions & Investigations processes into a unified end-to-end Pega case-management model, while supporting Phase 1 automation and Phase 2 expansion into additional payment rails, enhanced routing, financial-adjustment and STP-oriented capabilities.
- Supported Phase 2A Fedwire delivery through requirements clarification, UAT and defect triage, with 13/13 user stories achieving UAT sign-off.

Project: 2

Client: NatWest, UK
Primary Role: Senior Business Analyst
Duration: Dec 2024 – Dec 2025

Project Description:
Cross-border payment-investigation implementation on Pega Smart Investigate (Pega Infinity '24) covering intake through resolution and outbound correspondence.

Roles & Responsibilities:

- Defined end-to-end investigation intake and case-creation requirements across **front-office, back-office payment operations, automated inbound SWIFT MT/ISO 20022 messages, and NLP-driven email channels**.
- Authored and refined **epics, user stories, acceptance criteria, use cases, business rules and functional requirements**, translating business and operational needs into implementable Pega requirements.
- Defined **intent-to-resolution workflows** covering non-receipt claims, payment recalls/cancellations, return-to-sender, payment re-issue and requests for information.
- Defined functional requirements for **investigation case routing, orchestration, resolution activities, outbound correspondence and exception handling** from case initiation through closure.
- Defined outbound correspondence requirements covering **SWIFT MT103, MT192 and MT199**, together with ISO 20022/CBPR+ **pacs.008, pacs.004, camt.056, camt.110 and camt.029** messages.
- Defined **4-eye and 6-eye verification requirements**, including Supervisor and Manager approval based on payment actions and applicable amount thresholds before funds movement or outbound correspondence.
- Defined requirements for **SWIFT Case Management and Stop-and-Recall processing**, including standard cancellation-reason handling for scenarios such as duplicate payment, fraud, incorrect amount and incorrect agent.
- Defined the **duplicate-payment detection model** using attributes including payment amount, payment date, transaction references and account information to support automated linking versus manual review.
- Documented **Nostro/Vostro reconciliation requirements across five break types** and defined REST API integration requirements between the reconciliation engine and investigation platform.
- Defined **role-based access and persona-specific functionality** for Agent, Payment Specialist, Supervisor and Manager users.
- Led/supported **UAT, defect triage and business sign-off**, validating investigation workflows and operational functionality against agreed business requirements.

Impact:

- Supported the transformation of manual payment-investigation activities into structured Pega Smart Investigate workflows covering multi-channel intake, investigation, verification, resolution and outbound correspondence.
- Identified payment-processing limitations through AS-IS/TO-BE and gap analysis ahead of go-live, enabling required development and configuration changes to be incorporated into the target solution.

Project: 3

Client: JPMC, USA
Primary Role: Business Analyst
Duration: Sep 2022 – Nov 2024

Project Description:
Cross-border FX payment-investigation implementation on Pega Smart Investigate 8.6 covering inbound-message intake through resolution.

Roles & Responsibilities:

- Defined investigation intake requirements covering inbound **SWIFT, SSR and eServe messages**, supporting creation and processing of payment-investigation cases.

- Authored **BRDs, FRDs, user stories, acceptance criteria, use cases and functional specifications**, translating operational requirements into functional solution requirements.
- Defined requirements for different investigation scenarios and associated **outbound SWIFT MT correspondence** exchanged with counterparties throughout the investigation lifecycle.
- Analysed **cross-border and multi-currency payment requirements**, including transaction/investigation currencies and FX-conversion scenarios, clarifying them with international business and technology stakeholders.
- Documented **SWIFT message-parsing, field-mapping, data-validation and exception-handling requirements** for inbound messages, including **error-queue handling** for messages that failed automated parsing or validation.
- Performed **AS-IS process analysis and gap analysis** of spreadsheet-and-email-driven investigation activities, designing automated **TO-BE investigation workflows** to reduce manual processing and improve accuracy.
- Maintained the **Requirements Traceability Matrix (RTM)**, ensuring business and functional requirements remained traceable through implementation and testing.
- Prepared **UAT scenarios and test cases**, supported business testing and helped validate implemented functionality against documented requirements.
- Coordinated **defect triage and requirement clarification** between business, development and QA teams across onshore and offshore delivery.

Impact:

- Supported the transition of spreadsheet-and-email-driven cross-border FX investigation activities toward automated Pega Smart Investigate workflows.
- Enabled structured SWIFT message parsing, mapping, validation and exception handling within the target investigation platform.

Project: 4

Client: PeopleHCM
Primary Role: Business Analyst
Duration: Dec 2021 – Aug 2022

Project Description:
Enterprise HCM workflow platform on Pega with HR approval automation and REST API integrations.

Roles & Responsibilities:

- Authored **PRDs, BRDs, FRDs, user stories, acceptance criteria, use cases and functional specifications**, documenting business requirements, system behaviour and functional rules.
- Analysed HR approval processes and identified opportunities to transition manual activities into **automated Pega workflows**.
- Produced **AS-IS/TO-BE process maps** using BPMN, UML and DFD techniques to document current processes and target-state workflow designs.
- Performed **gap analysis** between current operational processes and target capabilities to identify workflow and process-improvement requirements.
- Defined functional requirements and integration touchpoints for **REST API-based integrations** supporting the HCM platform.
- Owned and prioritised the **product backlog** in Jira/Confluence using **MoSCoW and value-versus-effort analysis**, supporting structured release planning.
- Facilitated **Agile/Scrum ceremonies**, requirement walkthroughs, backlog refinement and stakeholder discussions with offshore delivery teams.
- Led **UAT activities**, supporting business validation, defect management and release-readiness activities.

Impact:

- Supported automation of manual HR approval workflows through Pega-based process orchestration and REST API integration.
- Improved delivery visibility through structured backlog management and Power BI KPI reporting covering SLA compliance, feature adoption and release quality.

Professional Certifications

Business Analysis

- PEGA – Certified Pega Business Architect (CPBA)
- Scrum.org – Professional Scrum Product Owner I (PSPO I)

Academic Background

- Bachelor of Technology (B.Tech) in Electrical and Electronics Engineering from Jawaharlal Nehru Technological University, Kakinada, India, 2015–2019
